Technology choices

Live demonstration

Conclusion

Context

- Qualyse : public health lab, near Niort
- PCR tests on goat milk
- Contagious mycoplasma disease → 4 targets (3 mycoïdes + 1 agalactiae)
- Herds in 79 (Deux-Sèvres) & 86 (Vienne) · 16 (Charente) attached
- 3 sessions / year

Needs & data

- Today: manual chain → Access · hand joins · Excel · manual colours · manual score
- = slow, error-prone
- Goal: automate + interactive dashboard
- User: the lab / the vet following herds
- Ct value → 40 = negative · lower Ct = stronger positive
- 3 levels: negative / weakly positive / strongly positive
- Base: 640 herds · ~43,300 analyses · 25 sessions (2018→2026)

manual ❌

automated ✅

Project management (SCRUM & Kanban)

- Method imposed: SCRUM · sprints
- Scrum Master: Manon · Product Owners: teachers
- User Stories → MoSCoW priorities
- INVEST (stories) / SMART (tasks)
- Daily stand-ups
- Excel = backlog + burndown · Trello = Kanban (Not started / In progress / Done)
- Short timeframe → MVP first, then increments

Technology choices

- Python → data cleaning, automation
- Streamlit → web app, nothing to install
- Plotly → charts + animated maps
- AgGrid → interactive tables (mirrors lab's Excel)
- SQLite → structured history, easy new sessions

Conclusion

- Full chain operational
 - import → classification → indicators → statistics → maps
→ export Excel/PDF
 - backup & restore
- Value for Qualyse: time saved · clearer herd follow-up · scalable (new targets / periods)
